

A large, bold black letter 'S' is centered on a white background. A thin, glowing yellow ring surrounds the top curve of the 'S'. At the top right of the 'S', there are three short, horizontal black lines of varying lengths, creating a stylized 'halo' effect.

Smarty

“Smarty presents a display and an app. It pretends to revitalize city living at a neighborhood level. Something that has been lost in big cities.”

Luís Rita

Display

- 5G Communication
- Ambient Light Sensor
- Built-in Mic & Speakers
- IR Camera
- LED Illumination
- Proximity Sensor
- UHD Camera
- Back & Front LED Display
- Slimmest Outdoor Screen
- Ultraresistant Glass
- (U)HD Screen
- High Screen/Body Ratio

App

- Lightweight App
- Available for Android & iOS
- Intuitive Interface
- Easy & Secure Payment
- Detailed & Real-Time Info
- Ad Scheduling, Preview & Prices

Affordable & Easy to Use

Website

The image shows a futuristic user interface for a smart city website. At the top center is a large letter 'S' with a halo, symbolizing a super-smart system. Below it are two main sections: 'Meter' on the left and 'Display' on the right, both set against a background of a city skyline at night.

Meter

- Visors are not necessary anymore.
- Cheaper production costs.
- Using last generation batteries and 5G communication, they may last more than 15 years.
- It will be possible to check the water consume and receive different types of alerts (e.g.: water leakage).
- Invoices, price rates... Everything in the same place.
- Use an ultrasonic sensor to detect waterflow.
- Meter will only contain fixed parts. Longer life-span.
- Water companies able to precisely monitor water consumption and adjust the service accordingly to users' needs for a given region.
- Due to the absence of mechanical parts, hacking will be almost impossible.
- Companies are losing millions of dollars.

Display

- Connected to the powerline or, eventually, charged by solar energy.
- LED screen with higher screen-to-body ratio.
- Speakers intended to reproduce sounds in specific situations.
- Intended to stream what is being broadcasted by 5G. Thus, they require less technology than usual.
- The presence of cameras could trigger the action of several features according to user facial reactions or if looking at it.
- Users interact with them using an app.
- General applications may include advertisement or promotion of local events, specially for elders, who do not use social networks.

At the bottom center of the interface is a black bar with the text '5G' in white. The entire interface is set against a dark blue background with a city skyline at night, and light beams connect the interface to the city below.
